

Replacement Barrel Band
for the Air Arms S200 Rifle.

Thank you for your purchase.
Your pack should contain -
1 off Barrel Band with 15.0 x 1.5mm o-ring

Safety first.

Observe safe practices when handling your rifle and follow the manufacturer's safety instructions when doing so. Check your rifle is not loaded and is de-cocked whenever working on it.

Installation.

1. Remove silencer.
2. Remove the air filler cap.

3. Remove the retaining screw holding the factory fitted barrel band from the underside of the stock and remove the action from the stock.

4. Apply a small amount of light gun oil to the outside end of the barrel and to the 'o' ring on the Rowan Engineering barrel band to aid its fitting.

5. Take the Rowan Engineering barrel band and gently press it over the end of the barrel. Take care when pushing the band over the notch in the front end of the barrel to not pinch the 'o' ring. Making a side to side / rotating motion will help.

6. Push the barrel band fully along the barrel and over the air tube.

7. Re-fit the stock and retaining screw.
8. Re-fit your silencer and filler cap.
