

## Rowan Engineering

Aluminium Bolt Handle for the Air Arms  
S200 Air Rifle.

Thank you for your purchase.

Your kit should contain -  
1 off Bolt handle  
1 off 5mm locking washer.

### Safety first.

Observe safe practices when handling your rifle and follow the manufacturers safety instructions when doing so. Working on any air rifle can be dangerous.

It is recommended that the rifle is emptied of air, or the air cylinder is removed from the rifle. Please see the rifles manufacturers instructions on how to do this.

Remove the existing bolt handle by unscrewing the locking nut from the end of the factory fitted handle.

The action may need to be removed from the stock so the old handle can be turned through 360° to unscrew it from the bolt probe. This may be necessary if the factory fitted handle has been Loctited in place.

Take care not to use excessive force when turning the handle off the bolt probe.

Fit the replacement Rowan Engineering handle on to the bolt probe followed by the locking washer and tighten the 5mm round nut when the handle is in the correct position.
