

TX200 Cocking Lever Grip.

Thank you for your purchase. Please read these instructions before fitting.

Your package should contain –

- 1 off Lever Grip.
- 1 off 2.0mm allen key

Safety first.

Observe safe practices when handling your rifle and follow the manufacturer's safety instructions when doing so.

Take extra care when working on your rifle.

Ensure that the rifle is not cocked and the safety catch is set to safe and is absolutely not loaded with pellets and the area is safe.

Important - Fitting the lever should not require any force and be a sliding fit on the lever.

1. Before fitting, please check the outside and end of the lever is free from any marks, scuffs or burrs of any kind.

If the end of the lever is not completely smooth the grip may get stuck and may require force to remove it again damaging the lever, grip or both.

If any marks are present they should be very carefully removed with fine emery or a fine abrasive stone.

2. Apply a thin covering of light oil on the end of the lever where the grip will fit.
3. Slide the grip in to position with the flat side facing the barrel.
4. Gently 'nip' the 3 locating grub screws. The 2 front screws should locate in to the groove at the end of the lever.
